

Community Choice Energy

Community Choice Aggregation (CCA), often referred to as Community Choice Energy (CCE), are local, not-for-profit, public agencies that provide electricity service to residents and businesses. Given that they are local, with decision-making meetings open to the public, CCAs enhance *energy democracy* by being more accessible and accountable to the local community.

Community Choice introduces competition and consumer choice into the electricity sector with a focus on local, renewable energy to stimulate rapid innovations in clean energy systems. As not-for-profit agencies, Community Choice energy providers are not beholden to multi-million dollar CEO salaries or shareholder returns, but rather to stable, competitive pricing for consumers and increasingly resilient, clean, and local energy systems. [According to CalCCA](#), to date, CCAs in California have contracted for over 3,600 Megawatts (MW) of clean generation capacity, and supported over 4,270 jobs.

Powerful Impacts for Community Choice: ¹

- **21 operational Community Choice agencies (CCAs) in California**
- **Serving 10 million+ customers in California**
- **Supporting 4,200+ jobs in California**
- **Hundreds of millions of dollars made available for reinvestment in local communities.**
- **3,600+ Megawatts of new renewable energy**
- **Dozens of new innovative programs for customers**
- **940,000+ metric tons of greenhouse gas emissions avoided per year.**
